Message from the Secretary

Kansas is proud to be known across the nation and the world as a leader in agriculture production. Farming and ranching have been the lifeblood of the economy, culture and service of Kansas since its founding, and agriculture continues to be the leading industry in communities across the state. This publication is provided annually as a reliable reference book to demonstrate the scope and depth of that agricultural impact.

Kansas agriculture benefits from an abundance of land used for agriculture purposes, with 45 million acres of land in production--over 85% of the state's land area. Family farms continue to be the backbone of Kansas agriculture, as 93% of the over 55,700 farms in Kansas are family owned. Kansas is consistently a leader nationally in the production and processing of grain sorghum, winter wheat, and beef cattle. Agriculture contributes \$88 billion in total economic value across 73 agriculture and agriculture-related sectors. In 2024, Kansas exported over \$4.75 billion in agricultural products to 94 foreign markets around the world. These exports will be increasingly important as projections indicate that the growth in world population will double food needs by the year 2050, challenging farmers and ranchers in Kansas and worldwide to continue to meet demand.

In 2024, Kansas agriculture saw growth in production for most of the major commodities, including corn, grain sorghum, winter wheat, soybeans and canola. High yields and competition in global markets led to lower prices, which has challenged farmers as input costs have remained high. As with the US, the Kansas cattle herd continued to grow smaller, but the inventory of milk cows as well as hogs and pigs saw an increase. Other factors had an impact on the agriculture industry in Kansas in 2024, including slightly lower export numbers, continued effects of the ongoing highly pathogenic avian influenza outbreak, and persistent drought conditions across the state, although slightly improved from previous years.

The entirety of Kansas agriculture can't be reflected in statistics like yields, income, prices and acres, but the data that are included in this issue of Farm Facts are a meaningful summation of what Kansas agriculture looked like in 2024. The numbers that are included in this report represent the thousands of farmers, ranchers and agribusinesses that make up the whole of Kansas agriculture and the impact they have on their state and their local community.

Mike Beam
Kansas Secretary of Agriculture

Introduction

Welcome to the 2025 Kansas Farm Facts, a reliable reference on production and economic statistics for agriculture in the State of Kansas. This annual record includes data on agricultural production, prices, farm income, and other economic measures for 2024 and previous years.

Most of the data in this publication is collected from Kansas farmers, ranchers, and agribusinesses who voluntarily respond to surveys and Census of Agriculture questionnaires administered by USDA's National Agricultural Statistics Service (NASS). Additional data sources include the USDA Economic Research Service (USDA ERS), USDA Foreign Agricultural Service's Global Agriculture Trade System (USDA FAS GATS), National Oceanic and Atmospheric Administration (NOAA), U.S. Drought Monitor, and the Kansas Department of Agriculture (KDA).

The statistics are organized into three sections: general economics, crops, and livestock. Within each section, commodities/species are arranged alphabetically. Historical information is included with current data. Data prior to 2000, with some exceptions, are listed by decade. A link to the source accompanies each table.

In addition to the Table of Contents, this publication includes lists of tables and figures. Tables and figures are each numbered in the order they appear. An appendix at the end of the document provides additional information, tables, and figures for further clarification. A footer link is provided to return you to the Table of Contents.

Any questions on the content of this report can be directed to the KDA Office of the Economist.

Kansas Bluestem Pasture Survey for 2023 and 2025

Table 53 Acres grazed under different Kansas Bluestem Pasture lease types

Lease Type	Average acres grazed		% of total reported acres	
	2025	2023	2025	2023
Short summer	3,163	2,785	44	44
3/4 summer	658	1,391	6	12
Full summer	1,146	1,110	36	27
Full year	790	1,241	13	16
Winter grazing	218	238	1	1

Source: [Bluestem Pasture Survey by Kansas State University](#)

Note:

- 1 - 2025 Short summer: generally runs from May 1 to August 1
- 2 - 2025 ¾ summer: most contracts run from May 1 to around September 1
- 3 - 2025 Full summer: typically runs from May 1 to October 31
- 4 - 2025 Winter grazing: commonly begins around November 1 and lasts for approximately six months

Note:

- 1 - Production adjustments made for changes in inventory and for in-shipments.
- 2 - Sales (lb) excludes custom slaughter for use on farms within the State.
- 3 - Sales (\$) are receipts from marketings and farm slaughter sales.
- 4 - Value (\$) is home consumption.

Note:

1 - Data may include temporarily closed plants.

2 - Federally inspected plant counts are reported as of March 1 for 1967-1977 and as of January 1 for 1978-2023.

3 - Other facilities are not federally inspected and are typically operating under a state or federal exemption from continuous USDA Food Safety and Inspection Service (FSIS) inspection. These operations, such as custom-exempt, state-inspected, or small-scale exempt facilities, still undergo periodic inspections. They must comply with federal and state requirements, including the Federal Meat Inspection Act (FMIA), Kansas Meat and Poultry Inspection Act (KSA), Kansas Meat and Poultry Inspection Regulations (KAR), Poultry Products Inspection Act (PPIA), and Humane Methods of Slaughter Act (HMSA).

Note:

- 1 - Production (lb) adjustments made for changes in inventory and for in-shipments.
- 2 - Sales (lb) excludes custom slaughter for use on farms where produced and interfarm sales within Kansas.
- 3 - Sales (\$) = Receipts from marketings and farm slaughter sales.
- 4 - Gross income = sales + home consumption

**KANSAS
APPENDICES**

Notes

General

- The data are current as of Fall 2025. Differences in data compared to previous Farm Facts may be due to updates as information becomes available.
- All financial statistics are reported in nominal dollars.
- All years correspond to the calendar year of January 1 to December 31, unless otherwise noted.
- Tables and figures are numbered separately and sequentially in the order they appear in the document.
- Data prior to 2000, with some exceptions, are listed by decade.
- Data reporting has been expanded or added as it has become available.
- Some data reporting has been dropped due to discontinued surveys, obsolete metrics, or lack of or incomplete information.

Marketing years

The marketing year is the period when a single crop/harvest cycle of a commodity is marketed. Most commodities follow a January 1 to December 31 marketing year in the U.S., but some commodities' marketing years do not align with the calendar year. These exceptions are listed below.

Table 104 U.S. marketing years for commodities grown in Kansas

Commodity	Beginning Date	Ending Date
Hay	May 1	April 30
Barley	June 1	May 31
Oats	June 1	May 31
Wheat	June 1	May 31
Canola	July 1	June 30
Cotton	August 1	July 31
Corn for grain	September 1	August 31
Sorghum for grain	September 1	August 31
Soybeans	September 1	August 31
Hogs	December 1	November 30

USDA NASS Data

Several key reporting changes for USDA NASS impacted the *2025 Kansas Farm Facts*. When available, all data was included in this record. Quotes are from USDA NASS Census Definitions.

- *Operators/Producers*: "The term 'operators' has been replaced with the term 'producers'...For the 2017 Census of Agriculture, NASS changed the demographic questions to better represent the roles of all persons involved in on-farm decision making. As a result, in 2017 the number of producers is up by nearly seven percent to 3.4 million [at the national level], because more farms reported multiple producers. Most of these newly identified producers are female. While the number of male producers fell 1.7 percent to 2.17 million from 2012 to 2017, the number of female producers increased by nearly 27 percent to 1.23 million. This change underscores the effectiveness of the questionnaire changes."

- *County-Level Estimates of Certain Crops*: “The U.S. Department of Agriculture’s National Agricultural Statistics Service (NASS) will no longer publish county level estimates for dry edible beans, flaxseed, hay (alfalfa and other), potatoes, sugar beets, sugarcane, sunflower (non-oil and oil varieties) and tobacco. In addition, NASS will discontinue county estimates based on irrigated/non-irrigated practices for all crops. These changes are effective beginning with the 2019 crop year.”

Glossary

Definitions

- *Average* refers to the mean or typical value of the data for the specified region, calculated by dividing the sum of values by their count.
- *Median* refers to the middle or central value of the data for the specified region, calculated by defining the midpoint of the values arranged in order from smallest to largest.
- *NESOI* refers to export products not elsewhere specified or included.
- *Operator (USDA NASS 2012 Census of Agriculture)* “The term operator designates a person who operates a farm, either doing the work or making day-to-day decisions about such things as planting, harvesting, feeding, and marketing. The operator may be the owner, a member of the owner’s household, a hired manager, a tenant, a renter, or a sharecropper. If a person rents land to others or has land worked on shares by others, he/she is considered the operator only of the land which is retained for his/her own operation. The census collected information on the total number of operators, the total number of women operators, and demographic information for up to three operators per farm.”
- *Producer (USDA NASS 2017 Census of Agriculture)* “The term producer designates a person who is involved in making decisions for the farm operation. Decisions may include decisions about such things as planting, harvesting, livestock management, and marketing. The producer may be the owner, a member of the owner’s household, a hired manager, a tenant, a renter, or a sharecropper. If a person rents land to others or has land worked on shares by others, he/she is considered the producer only of the land which is retained for his/her own operation. The census collected information on the total number of male producers, the total number of female producers, and demographic information for up to four producers per farm.”
- *Other Disappearance (USDA NASS Cattle on Feed)* “Other disappearance includes death loss, movement from feedlots to pasture, and shipments to other feedlots for further feeding.”

Symbols

The following symbols are used within Farm Facts:

- (D) Data has been withheld to avoid disclosing information for individual operations or cannot be computed due to withheld data.
- - No information available, USDA data.
- 1/ Insufficient reports to publish, Bluestem Pasture Report Data
- ~ No Response, Bluestem Pasture Report Data
- < Less than
- > Greater than

Abbreviations

The following abbreviations may be used within Farm Facts:

- Bu or bu Bushel(s)

[Return to Table of Contents](#)

- ¢ Cents
- \$ Dollars
- Cwt or cwt Hundredweight = 100 pounds
- gal Gallon(s)
- in Inch(es)
- Inv Inventory
- Lb or lb Pound(s)
- NESOI Not elsewhere specified or included
- T or t Ton(s)
- Repl Replacement
- Cons Consumption

The following agricultural district abbreviations are used within Farm Facts:

- NW Northwest District
- WC West Central District
- SW Southwest District
- NC North Central District
- C Central District
- SC South Central District
- NE Northeast District
- EC East Central District
- SE Southeast District

The counties within each agricultural district can be found in a table that follows and Figure 12.

Conversions

Table 105 Crop conversions

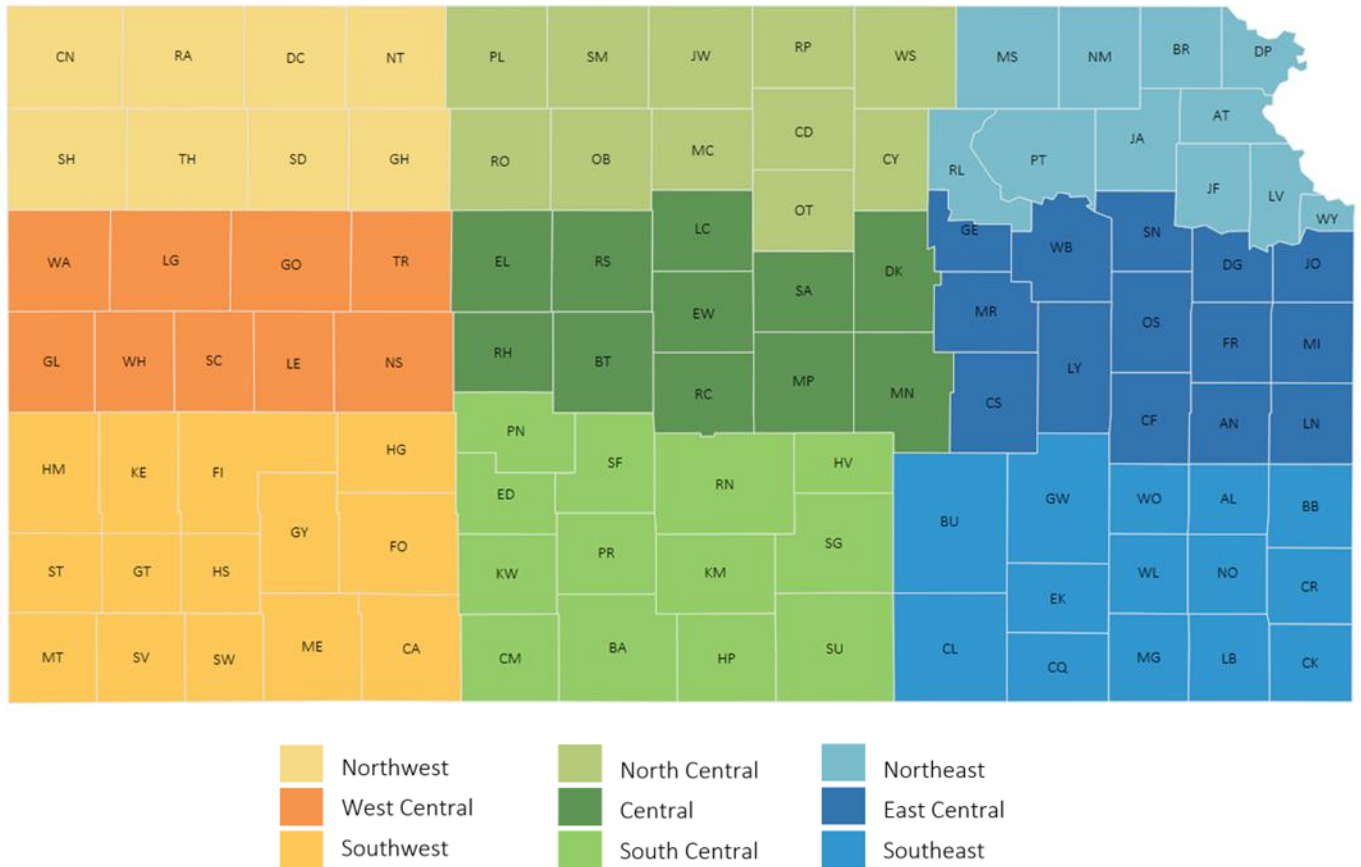

Crop	Unit	Weight in pounds
Corn	Bushel	56
Cotton	Bale, Net	480
Cream, 40% butterfat	Gallon	8.38
Grain Sorghum	Bushel	56
Milk	Gallon	8.6
Oats	Bushel	32
Soybeans	Bushel	60
Wheat	Bushel	60

Drought Monitor

The U.S. Drought Monitor is jointly produced by the National Drought Mitigation Center at the University of Nebraska-Lincoln (NDMC), U.S. Department of Agriculture, and National Oceanic and Atmospheric Administration.

Table 106 Historically observed impacts of drought classifications in Kansas

Category	Historically observed impacts
D1	Wheat and grasses are drought stressed; hay demand increases Fire danger increases Pond levels are low; habitat is poor in migratory flyways
D2	Wheat, corn, soybean, and hay yields are low; crops are severely damaged Burn bans are implemented; firework sales are banned; more grass fires occur Blue-green algae impacts water supply; ponds and streams are dry
D3	Cattle sales are high; emergency grazing is opened; corn and wheat crops fail; pasture conditions are poor Major infestation of locusts occurs; quail and pheasant populations are reduced; trees are stressed Emergency water supplies are needed; river levels are low; municipal water restrictions are implemented
D4	All crops are severely impacted/not harvested; ground is cracking Wildfires and large dust storms occur All aquatic species and food chains are affected; fish kills occur Negative impact on economy is noted Irrigation is turned off; river has dried up

Table 107 Drought classifications

Category	Description	Palmar Drought Severity Index (PDSI)	CPC Soil Moisture Model (Percentiles)	USGS Weekly Streamflow (Percentiles)	Standardized Precipitation Index (SPI)	Objective Drought Indicator Blends (Percentiles)
D0	Abnormally Dry	-1.0 to -1.9	21 to 30	21 to 30	-0.5 to -0.7	21 to 30
D1	Moderate Drought	-2.0 to -2.9	11 to 20	11 to 20	-0.8 to -1.2	11 to 20
D2	Severe Drought	-3.0 to -3.9	6 to 10	6 to 10	-1.3 to -1.5	6 to 10
D3	Extreme Drought	-4.0 to -4.9	3 to 5	3 to 5	-1.6 to -1.9	3 to 5
D4	Exceptional Drought	-5.0 or less	0 to 2	0 to 2	-2.0 or less	0 to 2
